

Activating EndNote X2 for OpenURL Linking Purdue University Libraries

To activate OpenURL linking for EndNote XI, you need to configure EndNote to Purdue's OpenURL service.

1. Start up EndNote
2. Go to the top menu and choose **Edit → Preferences ...**
3. Select **URLs & Links** from the list of preferences
4. In the **OpenURL Path**, change the entry to: **http://sfx6.exlibrisgroup.com/purdue**
5. In the **Arguments** field, change the part that states ISI:WoS to **ISI:endnote** (see below). That's it!

To activate OpenURL linking, open a particular reference that interests you, and then under the top EndNote menu choose: **References → URL → OpenURL Link**

This will open up our SFX service and attempt to find the full-text of the article if available.
